

Hello!

First of all, thank you for your interest in our software! Let's review your questions more:

- 1) sorry, but we don't provide the Jot installation except for Cloud plans. But you may find many experts in our community to ask.
- 2) Sorry, chat's are available only for registered members. Only if you setup the guest mode in Rocket chat.
- 3) Seems you got our info wrong - our Cloud plans are described here <https://una.io/page/hosting> - any of them includes the Jot server setup.
- 4) About demo - you may check it on una.io or online.me site after the registration.

With best regards

Hi,

I'm still thinking about to start the jot server with my managed-hosting-service of my una-homepage. they have a attractive offer for an extra server, which can be managed by shell.

i can do the os and java installation as the base for the jot-server.

- you are offering two services to start and set-up the jot-server?
- can i go live on my homepage also for not logged-in users (live broadcasting like youtube)? or with rocket-chat?
- which offer fits for the system requirements of a live channel for some users (see also translated link)?

Re: Messenger

- what is the offer? is it 25\$ for installing, set-up the jot server and una integration?
- did the jot-server save data at the local installation or did una do this job (no extra db necessary)?
- the messenger is on the una.io homepage- is there a demo of the messenger-functionality?

regards

Dusko
